

Approved Beacon Models (TACs)

Notes:

- For additional information on a specific beacon model select the report hyperlink associated with that model. Multiple reports are provided in cases where the manufacturer produces more than one variant of the same beacon but with different features.
- A particular beacon model may be sold under several different names. All alternative beacon model names provided to the Cospas-Sarsat Secretariat by the beacon manufacturer are listed in the detailed report.
- Some manufacturers use the same beacon model names for beacons with different type approval numbers.
- Cospas-Sarsat Numbers (No.) starting at 700 identify special use beacons. These beacon models are compatible with the Cospas-Sarsat System; however, they do not satisfy all Cospas-Sarsat technical and testing requirements as detailed in Cospas-Sarsat documents C/S T.001 (406 MHz beacon specification) and C/S T.007 (406 MHz beacon type approval standard). Therefore, they have not received a Cospas-Sarsat Type Approval Certificate.
- In the maritime domain, EPIRBs are designated as either float free (FF) or non-float free (Non FF). FF EPIRBs are designed to float away from a sinking vessel and activate automatically, whereas Non FF EPIRBs can only be activated manually.
- In the aviation domain, beacons are designated as either automatic or manual ELTs. Automatic ELTs are designed to be activated automatically using a crash sensor or G-switch, whereas manual ELTs can only be activated by the ELT operator.

C/S TAC No.	Beacon Model Name	Manufacturer	Beacon type
001	Tron 30S	Jotron AS (former - Jotron Electronics A.S.)	FF / Non FF EPIRB
002	RT 160M	Nova Marine Systems Ltd. (not in busines, see Orolia Limited,UK)	FF EPIRB
